

# SportCred

What's your A.C.S.?

Developed by: ILIR ACTION TEAM

Muhammad Osman Amjad

Kshitij Dahal

Vineet Desai

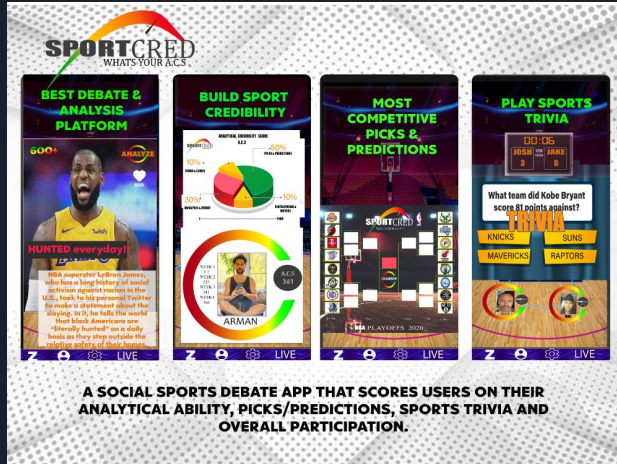

Maninder Dhanauta

Mahamad Jawad Jawid

Piyush Ukani

Jimmy Yu

# What is SportCred?

## The Concept:

- A place where people can build credibility
- Social element to bring together the Sports Fan community
- Welcoming to beginners and the elites

## The Details:

- Social media web app centered around the **Analytical Credibility Score**
- Trivia, Debates and Picks/Predictions
- Bracket-based user experience

# Why SportCred?

## Sports Enthusiast

- Watches sports religiously - Knows most recent sports development - Very outspoken and opinionated person - Like minded friends introduce him to SportCred

## Aspiring Analyst/Sports Better

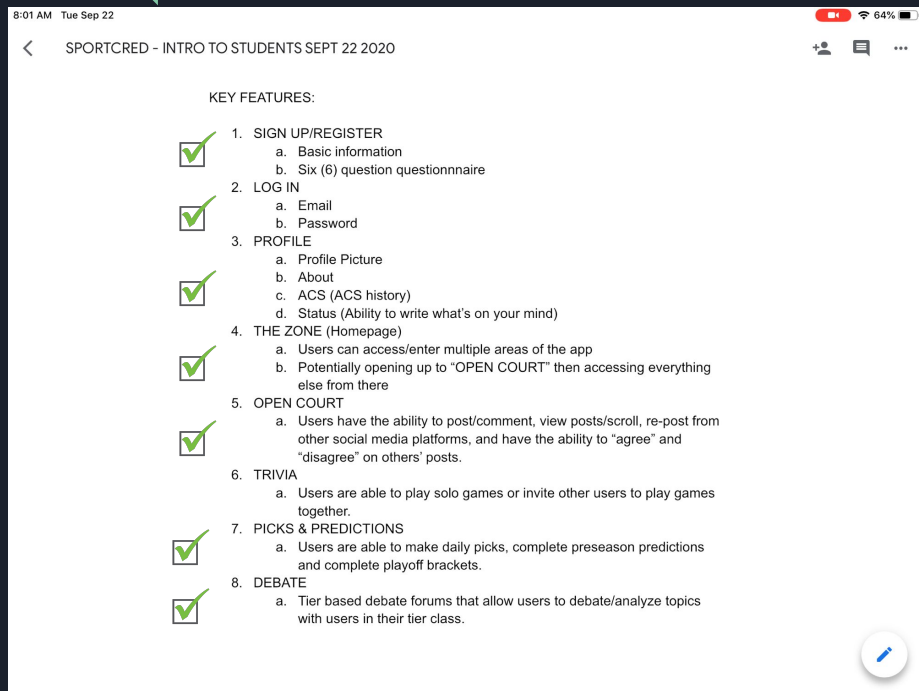

- The hustler - Up and coming analyst/journalist - Writes blogs but they don't get much recognition - Wants to build credibility - Joins SportCred because \*everyone\* is on it

## The Elite

- Well recognized faces - Has made it big and is respected - Joins SportCred to remain relevant and build a following

# Features Overview

## 3 Key Features

Trivia

Debates

Picks and Predictions

# Demo

# The Developers

*Ilir Action Team*

### Muhammad Osman Amjad: Contributions (Back End)

- Update ACSScore after games for picks and predictions
- Update ACSScore after debate and trivia
- Update ACSHistory after debate, trivia, picks and predictions
- Get posts for user per debate tier

## Kshitij Dahal: Contributions (Front End)

- Display Profile Page Info
- Update Basic Profile Page Info
- Debate Page and ACS Score Change Notif
- Nav Bar

### Vineet Desai: Contributions (Back End)

- Get user profile information from Database
- User's Picks & Predictions
- Change daily debate question every 24 hours
- Add user to the Radar List of another user

## Maninder Dhanauta: Contributions

- Started as backend
- Posting to the “Zone”
- Developed Debate feature
- Developed Trivia feature

### Jimmy Yu: Contributions (Back End)

- Setting Profile information in the Database
- User Posts & Radar List Posts
- Agreeance Scale on Debate Posts
- Trivia

### Piyush Ukani: Contributions (Front End)

- Authentication process
- Landing Page with Jawad
- Show all posts, radar posts and user's own posts
- Add comments, upvotes and downvotes to posts

Mahamad Jawad Jawid: (FrontEnd)

- SignUp Page
- Search and ability to follow other users
- Picks and predictions page
- Landing Page with Pi Ukani

Trust The ***Process***

# Highlights of Development

## FrontEnds:

- Pi Ukani
- Maninder Dhanauta
- Kshitij Dahal
- Mahamad Jawad Jawid

## BackEnds:

- Jimmy Yu
- Osman Amjad
- Vineet Desai

Split Team into Frontend and Backend so that each member can focus on their strength

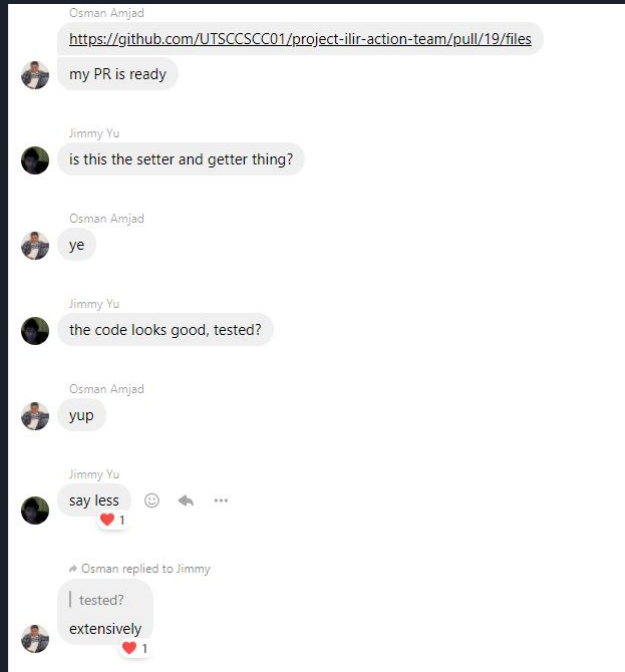

# Highlights of Development

Never commit directly to master, except for planning documents

# Highlights of Development

Every PR is code reviewed and tested extensively before merging to master

# Highlights of Development

**As George, I want to be able to follow other people and see them in my radar list, so that their posts are prioritized on my feed.**

**Details**

- Type: Story
- Priority: Medium
- Labels: None
- Sprint: IL Sprint 4
- Status: DONE (View Workflow)
- Resolution: Done

**Description**

Click to add description

**Attachments**

Drop files to attach, or browse.

**Sub-Tasks**

Task	Status	Assignee
1. After I've searched for a user, I can hit follow to add them to my radar list	DONE	Mahamad Jawid
2. When I follow someone, they should be added to my radar list	DONE	Vineet Desai
3. Friends posts should show only posts of people in my radar list.	DONE	Jimmy Yu
4. Call api to show only friends posts on friends posts page.	DONE	Piyush Ukani
5. My radar list should show on my profile	DONE	Kshitij Dahal
6. API to get radar list for a user	DONE	Osman Amjad

**People**

# Highlights of Development

- 
- 
- A screenshot of a development update log with a dark background. It lists updates from seven team members, each preceded by a circular profile icon. The updates are as follows:
- osman.amjad** 11/02/2020  
update: just about finished processPredictionResult api
  - Jimmy Yu** 11/02/2020  
update: finished comment, agree/disagree system. Need to test a bit more, and can make PR by tonight
  - Piyush(Pi) Ukani** 11/02/2020  
Update worked on il 42 making login persistent
  - Jimmy Yu** 11/02/2020  
[@Brian Lin](#) standup rn
  - jawadjawid** 11/02/2020  
made some progress on predections
  - Vineet Desai** 11/02/2020  
update: finished with previous task, almost done with new task.
  - maninder dhanauta** 11/02/2020  
update: almost done making post front end, now have to call backend api and error handle
  - Kshitij Dahal** 11/02/2020  
Update: almost done showing notification of ACS score change front end

Daily standups, biweekly retros and planning meetings to ensure everyone is well informed about progress

# Difficulties of Development

- Unequal division of work (only for Sprint 1)
- Remote debugging/discussion
- Lack of communication causing code written multiple times

# Standards & Techniques

Decisions that worked in our favour:

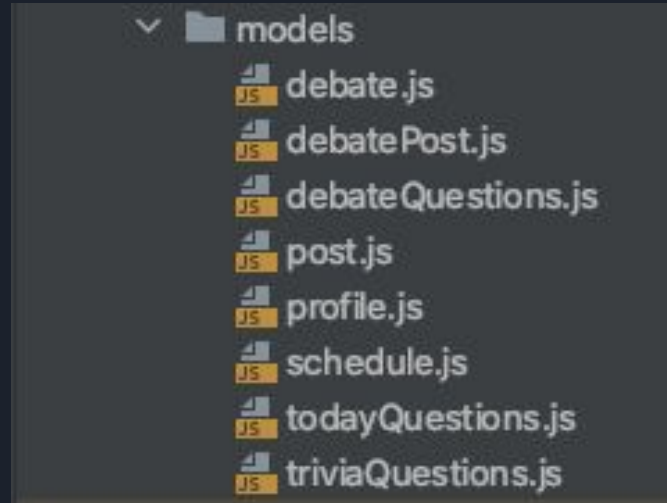

- Switched Maninder from backend to frontend after sprint 1
- Assigned similar tasks to the same person
- Completed and tested all the features of the sprint day before the demo
- Created a google doc where front end would write the necessary requirements in an api

# Software Architecture

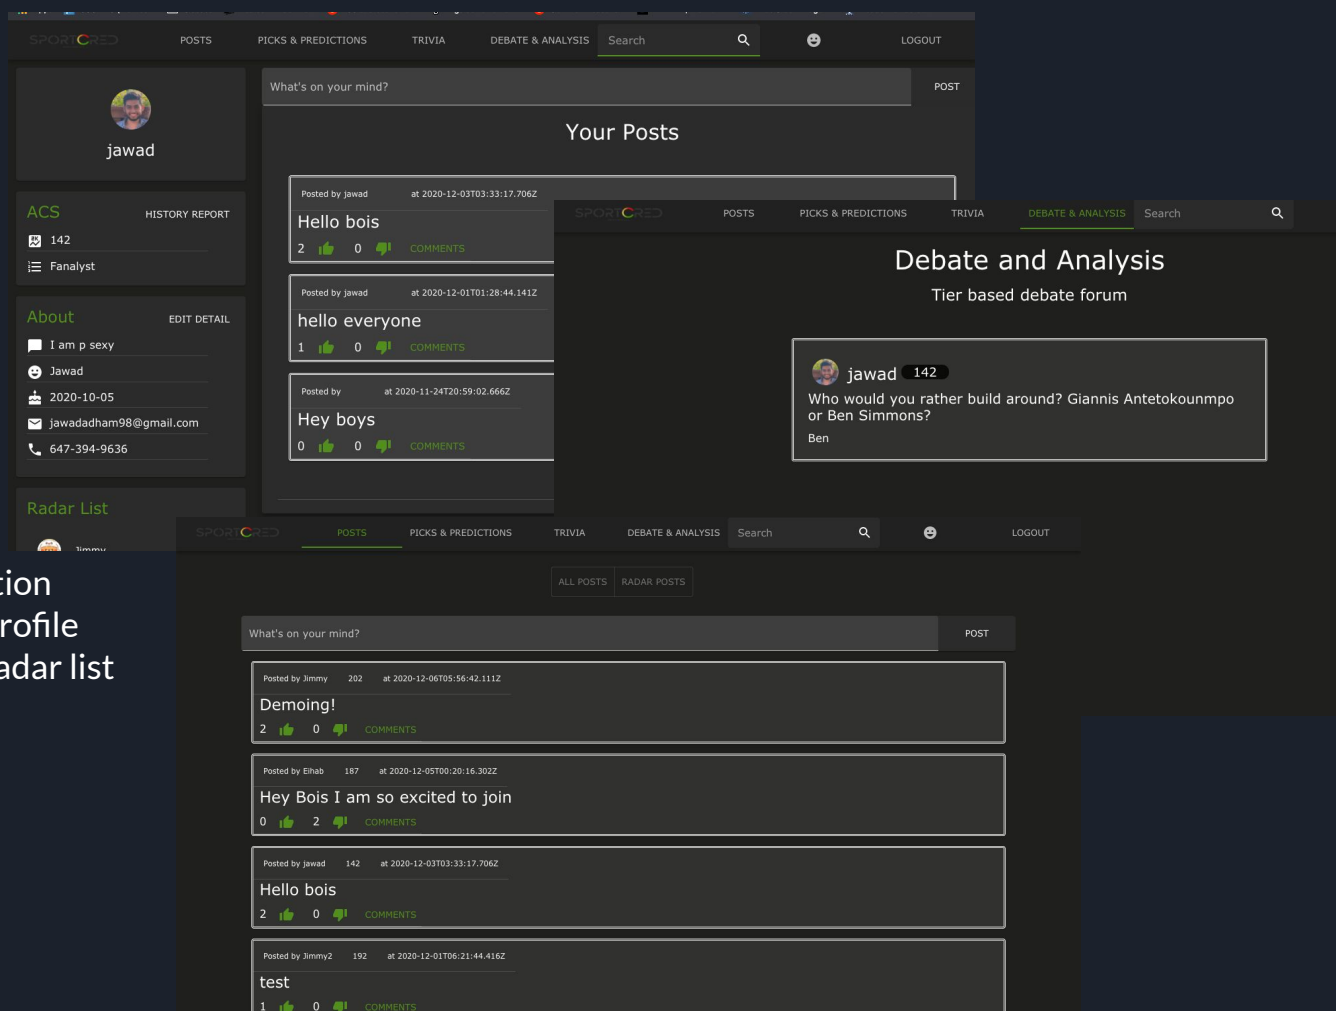

# Model

- Document Schemas

# View

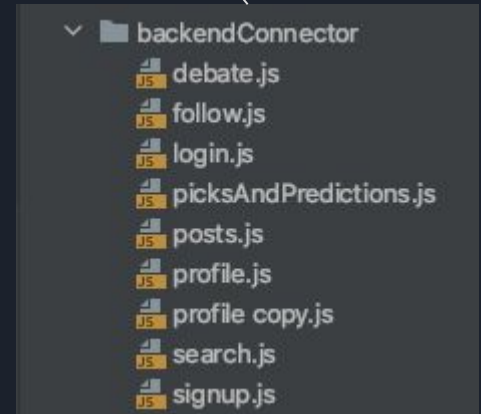

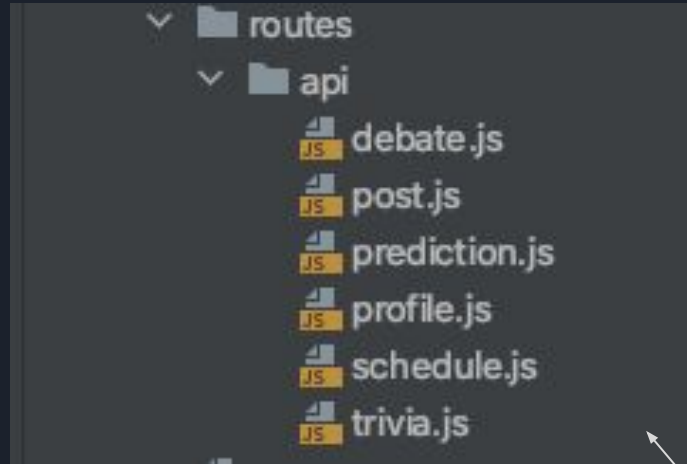

- Display different information based on logged in user (profile page, tier-based debate, radar list posts...)
- Call REST APIs

# Controller

- REST APIs
- Retrieve debate, posts, user profile, game schedule info...
- Called in backEndConnector

# Technologies & Tools

# Technical challenges

Learning new technologies such as Node Js, React Js, Express Js, MongoDB:  
we overcame this challenge by experience. As we built more features we became familiar with the technologies and spent less time on looking up small things related to these technologies.

Figuring out logic for notifications without scheduler:

As we didn't want to use 3rd party schedulers we thought of a simple logic in which we created a separate column where we would keep track of when to show the notifications since the notification have to be shown every 24 hours

CORS(Cross-Origin Resource Sharing) policy by browsers:

As we were running 2 different services we ran into issue where the CORS policy stopped us from sending API requests but we overcame this issue with using CORS library

Thanks for your time!
